BOROUGH OF SOMERSET
and
MUNICIPAL AUTHORITY OF THE BOROUGH OF SOMERSET
STORMWATER MANAGEMENT FEE STUDY

SECTION 1: INTRODUCTION

1.1 Background:

The Borough of Somerset recognized transformations related to operation, maintenance, responsibility and ownership of stormwater collection and conveyance systems across the Commonwealth of Pennsylvania. Municipalities and County governments in recent years have been joining with Municipal Authorities, Watershed Associations, and newly formed Stormwater Authorities to better manage stormwater assets. These shifts have largely been driven by the Municipal Separate Storm Sewer System (MS4) programs which require municipalities to hold permits for operation, maintenance, and improvements of their stormwater systems. Others have moved to regional or watershed-based organizations because this type of group aligns with the natural boundaries of stormwater systems.

The Borough of Somerset has operated their stormwater system in the same manner as the public water and sewer systems within the Borough; however, the water and sewer systems are owned by the Municipal Authority of the Borough of Somerset. The Borough and Municipal Authority executed a management agreement which established the Borough, its Manager, and staff as the persons responsible for operations, maintenance, improvements, and finances of the water and sewer systems. The Borough and Municipal Authority agreed to transition the stormwater system to ownership by the Municipal Authority and management by the Borough. The transition coalesces the management of the water, sewer, and stormwater systems. The Borough and Municipal Authority formalized the transition by agreement amendment and deed. The Municipal Authority of the Borough of Somerset has owned the stormwater system since November 2023 and the Borough of Somerset continues to provide management as it had prior to the transition.

The stormwater system owned by the Municipal Authority of the Borough of Somerset and managed by the Borough of Somerset includes all stormwater collection and conveyance facilities in the Borough of Somerset. These facilities include catch basins, inlets, manholes, conveyance piping, swales, roadway curbs, culverts, and other post-construction stormwater management (PCSM) best management practices (BMPs). Over time, the aboveground and underground stormwater infrastructure experiences various problems which inhibit the system's ability to properly collect and convey stormwater to the final discharge location. Aging can cause deterioration, blockages, damages, and other negative impacts resulting in decreased collection and conveyance proficiency. This can lead to flooding, property loss, debris, erosion, and many other concerns which often require expensive remediation.

Proactive maintenance and improvements are necessary to provide a functioning system. This includes regular operation, maintenance, repairs, administrative coordination, and replacements over time. These activities are costly and require extensive planning to ensure the infrastructure can manage stormwater within the Borough to a reasonable degree of protection. Stormwater infrastructure cannot be sized to provide protection against all severe weather events. The Borough generally applies Pennsylvania Department of Transportation practices when selecting and sizing stormwater facilities. Borough taxes were previously the sole funding source of the stormwater activities. The Municipal Authority will now set rates for funding stormwater activities, and this will eliminate the need to raise Borough taxes for funding stormwater activities.

1.2 Purpose:

This Study comprehensively evaluates current and future needs of the stormwater system and recommends a range of potential stormwater fees based on anticipated costs. Initially, the fees will only be assessed to Borough property owners which aligns with the agreement between the Borough and Municipal Authority. The Municipal Authority in the future may elect to engage tributary municipalities to participate in the stormwater program established by the Borough of Somerset.

At this time, stormwater fees will exclusively be assigned to Borough property owners because all properties contribute stormwater runoff. The degree to which a particular property contributes is directly related to the land cover, use, and facilities located on the property. In general, the amount of stormwater contributed by a property is directly related to the amount of impervious or pervious land cover on the property. Impervious surfaces such as pavements and buildings increase the amount of runoff from a property and contribute more stormwater to the system than pervious surfaces such as lawn, landscape, and vegetated areas. This study evaluates each property within the Borough to determine the amount of impervious and pervious surface throughout the Borough and specific to each property.

Once the amount and ratios of impervious and pervious surfaces are known then amounts of stormwater to be managed can be determined. This information will be used later to guide selection and sizing of stormwater facilities. Initially the information will guide the establishment of an impervious surface value for a typical residential Borough parcel. Establishing the typical value for a residential parcel is a method of quantifying and grouping impervious areas. The typical impervious area value for a residential property is referred to as Equivalent Residential Unit (ERU). This term is widely used by other entities to establish stormwater rates and mimics the Equivalent Dwelling Unit (EDU) which quantifies and groups sewage flow for a single-family residential home. ERU and EDU can vary across geographic and demographic regions and is calculated for each service or coverage area to provide a unit that reflects the community. This study determines the ERU for the Borough of Somerset based on the prevailing impervious and pervious information.

The types of properties vary within the Borough and this study will present recommendations related to property classifications based on the known and observed property types. The total number of ERUs, property types, and total annual cost will be the metrics used to recommend appropriate stormwater fees. The stormwater fee incurred per ERU must be sufficient to offset the annual and capital expenditures of the system.

1.3 Definitions:

EQUIVALENT RESIDENTIAL UNIT - The measure of impervious ground cover for a typical single-family residential Property within the Borough of Somerset used to assess fees for each parcel of property within the Borough of Somerset.

IMPERVIOUS AREA – land cover or surfaces that either prevent or impede infiltration or percolation of water into soil or absorption and uptake by vegetative. These surfaces include, but are not limited to, sidewalks, driveways, patios, roof tops, artificial surfaces, and parking lots. The typical materials which create impervious surfaces are concrete, asphalt, brick, stone slabs, artificial turf, compacted aggregate, and roofing materials.

OPERATION & MAINTENANCE COSTS – The associated costs with facilities, energy, manpower, materials, and other common costs required to operate and maintain the system to allow for collection, conveyance, detainment, transportation, and possible pumping of stormwater.

PERVIOUS AREA – land cover or surfaces promote or allow the infiltration or percolation of water into soil or vegetation. These surfaces include, but are not limited to, lawns, meadows, natural fields, woods, landscaping, gardens, agriculture areas, and green space. The typical materials which create pervious surfaces are grasses, trees, shrubs, mulch, open graded aggregates, and manufactured surfaces designed for infiltration. Pondered or wetted areas are also considered pervious for the purpose of this study and include natural and artificial wetlands, ponds, lakes, streams, pools, and water storage facilities open to atmosphere.

PROPERTY – a single lot, parcel, or tract of land defined by a single map number as assigned by the Somerset County Recorded of Deeds Office.

SECTION 2: STORMWATER UTILITY OPERATIONS, MAINTENANCE, AND CAPITAL

The Municipal Authority of the Borough of Somerset is currently responsible for the upkeep of the stormwater management system. To accomplish this, MABS must supply labor, materials, and equipment for the administrative staff and public works staff. The system will also require capital improvements to periodically rehabilitate the system. The following categories were included in the assessment of yearly expenditures that will be considered in the stormwater fee determination.

2.1 Administrative Costs:

The administrative costs associated with the stormwater system account for expenses related to management and finances. Administrative staff members are necessary to coordinate operations within the system, schedule and oversee maintenance, coordinate capital project planning, schedule and oversee employees, and administer billings and collections. Other associated costs can include accounting, auditing, engineering, and legal.

2.2 Operation and Maintenance Costs:

The annual operation and maintenance costs were evaluated to determine the associated and specific costs related to stormwater management. These costs include labor, equipment, and material for cleaning, inspecting, repairing, and installing new facilities. Regular operation and maintenance is necessary to keep the system clean and functional. Cleaning reduces the potential for blockages in the collection and conveyance infrastructure. Maintenance increases the longevity of the system components, reducing the frequency of replacement and associated costs.

2.3 Capital Improvement Costs:

Capital improvement costs were determined based on the anticipated lifespan of the system. Operation and maintenance greatly increase the lifespan of the system components; however, perpetual stress and degradation impact the infrastructure to the extent that replacement is eventually more cost effective than rehabilitation or repair. This study assumes a 50-year life cycle for all infrastructure. Cost information is presented in Section 4.

SECTION 3: EVALUATION OF STORMWATER RUNOFF AND QUANTIFICATION OF EQUIVALENT RESIDENTIAL UNIT

In general, impervious surfaces prevent infiltration of precipitation into soil and accelerate runoff rates. Wooded, grassed, and other vegetated areas consume precipitation, allow for infiltration, and slow runoff. Changing land cover from vegetated to impervious can lead to increased levels of flooding and erosion. There are several ways to calculate the effect of impervious area and for the purpose of demonstrating the effect of impervious surfaces this report provides the following example of the potential volume of runoff based on the Soil Conservation Service Runoff Curve Number Method.

$$Q = (P - I_a)^2 / (P - I_a) + S$$

Where Q = runoff (in), P = rainfall (in), S = potential maximum retention after runoff begins, and I_a = initial abstraction.

$$I_a = 0.2S$$

And

$$S = 1000 / CN - 10$$

Curve Numbers (CN) are provided by Technical Release 55, Urban Hydrology for Small Watersheds and are based on hydrologic soil groups. For the following demonstration a meadow in good condition and in soil group B is used.

Volume of Runoff Example - Meadow v. Impervious		
Parameter	Meadow	Impervious
CN	58	98
S	7.24	0.2
I _a	0.145	0.004
Q (in)	0.03	1.76
P (Rainfall, Inches)	2	2
Acres	1	1
Volume of Runoff (CF)	133	6,398
Volume of Runoff (Gallons)	995	47,861

The above example demonstrates that changing natural land cover to an impervious surface significantly increases the amount of runoff. This runoff can negatively impact public spaces, private property, and threatens public safety. Stormwater collection and conveyance facilities must be installed to mitigate some of these negative effects from impervious area. The above example does not reflect a detailed analysis of a particular region or tract within the Borough. The example is provided to illustrate the magnitude of impact of typical land cover changes. Prior to settlement and development, the Borough only had naturally occurring impervious surfaces.

The Borough of Somerset's Zoning Ordinance classifies properties by permitted uses which include Single Family Residential (R-1), Two Family Residential (R-2), Multiple Family Residential (R-3), Neighborhood Business (B-1), General Commercial (C-1), Central Commercial (C-2), Commercial Offices (C-3), Light Industrial (M-1), and Heavy Industrial (M-2). The uses define the improvement limit within each zone and don't restrict lesser developments to occur within the particular zone, so therefore, a single-family residential use is permitted within two family and multiple family zones. Single Family Residential structures are the most common type of structure within the Borough. Therefore, quantifying the average amount of impervious surface for a single-family residential use and assigning that value as a single unit to compare all other uses against is a reasonable approach. As noted previously, this mimics the accepted calculation methodology for sewage flows.

The Borough of Somerset includes 2,835 individual properties with varying amounts of impervious and pervious area. The impervious area contained on each property contributes to increased volumes and runoff rates of stormwater creating the need to have a stormwater management system. Each property generally contributes stormwater runoff as a direct relationship with the amount of impervious area on the property. The entire Borough and each individual property were analyzed as part of this study to determine the amount of impervious area presently on the property. Below is a summary of geographic land use data for the Borough.

Borough of Somerset – Land Cover Summary			
Description	Area (SF)	Area (Acre)	%
Pervious	48,250,355	1,108	63
Impervious	28,066,588	644	37
Total	76,316,943	1,752	100

Impervious area analyzed in this study was classified as either public or private property. Public property for the purpose of this study includes only municipal and state roadways. These public spaces are tracts of land that do not have defined parcel boundaries or map numbers assigned by Somerset County. Private property contains the majority of impervious area with the Borough.

Borough of Somerset – Impervious Area Summary			
Impervious Type	Area (SF)	Area (Acre)	%
Public	6,364,104	146	23
Private	21,702,484	498	77
Total	28,066,588	1,752	100

Private property varies in total parcel size and varies in impervious surface amounts. Typical land size categories were used to group and analyze the land cover demographics of the Borough. The results are provided in the following table. Refer to Appendix B for a complete list of all parcels within the Borough.

Borough of Somerset – Impervious Area Summary				
Parcel Size	No. of Parcels	Average Parcel Size (SF)	Average Impervious Area (SF)	Average Impervious Area (% of Parcel)
5 acres or more	81	921,000	80,218	8
1 to 5 acres	218	96,125	24,686	25
1 to 3/4 acre	90	38,017	13,666	35
3/4 to 1/2 acre	126	26,687	7,882	30
1/2 to 1/4 acre	624	14,721	4,992	34
1/4 acre or less	1696	6,208	2,645	43
Total	2835	43,053	7,655	

All parcels within the Borough boundary were analyzed to determine an appropriate ERU value. The majority of single-family homes are situated on parcels less than 1 acre, so a weighted average of impervious area on parcels less than or equal to one (1) acre is used to define the ERU value. The weighted average was determined to be 3,875 square feet of impervious surface.

There are 132 parcels within the Borough boundary that are considered Somerset Township parcels. The parcel analyses included situations where the Township parcels were included and excluded. The omission of the Township parcel from the analyses did not influence the results or averages, but should be considered when evaluating rates and revenue. The total Borough parcels within the Borough boundary is 2703 and the total quantity of ERUs within the Borough, based on an ERU value of 3,875, is 6,183.

Refer to Appendix A for detailed ERU data and results. Below is a summary of parcels and ERU values.

Borough of Somerset - Equivalent Residential Units (ERUs)		
3,875 SF = 1 ERU		
Description	Impervious Area (SF)	Parcels
Zero to 1 ERU	0 to 3,875	2,201
1 ERU to 2 ERU	3,875 to 7,750	205
2 ERU to 3 ERU	7,750 to 11,625	68
3 ERU to 4 ERU	11,625 to 15,500	57
4 ERU to 5 ERU	15,500 to 19,375	19
5 ERU or More	19,375 or More	153

Several properties within the Borough of Somerset have existing stormwater management facilities that control stormwater runoff and counter the negative effects of impervious areas. Each stormwater management facility was constructed to achieve a certain level of management based on the guiding ordinances and regulations of the time of construction. It is reasonable to recognize the investment made at each property in stormwater management and reduce ERUs for that property based on the amount of impervious area controlled and the level of management provided.

Stormwater management facilities must be maintained for function and to achieve the intended control benefit. Many stormwater facilities built prior to adoption of stormwater management ordinances only control runoff rates. Since there is a wide range of sizes, types, and benefits we recommend reviewing each stormwater management facility to determine the appropriate reduction in ERU or credit. Borough building permit records can be reviewed to determine which properties installed a stormwater management facility and property owners can submit requests for their stormwater management facility to be considered for a credit.

Mailings, surveys, and other community engagement actions are needed to inform the community and educate them on the stormwater program and potential for credit. Private stormwater facilities are beneficial to the overall system and will reduce costs for operation, maintenance, and capital.

We estimate that approximately less than 5% of Borough properties have an existing stormwater management facility and would be eligible for an ERU reduction or credit. Also, we estimate that approximately up to 10% of the properties will continue to maintain, retrofit an existing, or install a new stormwater management facility. Retrofits or new facilities will be the result of new development or

wanting to receive a credit. These credit assumptions are accounted for and reflected in Section 5 of this study.

SECTION 4: STORMWATER SYSTEM ANNUAL EXPENDITURES

The Borough of Somerset’s fiscal year is based on a calendar year. Year ending financials for years 2021, 2022, and 2023 were analyzed to determine stormwater expenses and total annual cost. Costs appear to gradually increase to accommodate inflation from year to year. Year 2023 was used to evaluate current stormwater expense and project future expense. Year 2024’s budget shows a small adjustment to account for inflation and was also used to evaluate stormwater expense. The Borough of Somerset anticipates increasing its investment in the stormwater system to address existing issues with flooding, failing infrastructure, and areas that lack infrastructure. This investment is reflected in the 2025 projection. Refer to Appendix C for detailed annual expenditure estimates.

STORMWATER FINANCIAL HISTORY AND PLANNING				
Year	Administration	Operations & Maintenance	Capital Improvements	Total
2023	\$212,900	\$293,600	\$0	\$506,500
2024	\$241,700	\$316,810	\$0	\$558,510
2025	\$248,900	\$361,500	\$594,000	\$1,204,400

The capital improvements projection does not account for any grant funding. It is assumed that the Borough of Somerset will periodically apply for and be awarded grants for stormwater capital improvement projects.

SECTION 5: STORMWATER MANAGEMENT FEES & CREDITS

The impervious area per Equivalent Residential Unit is 3,875 SF. Each property has been assessed and given an ERU designation based on the property’s impervious area. There is a total of 6,183 ERUs within the Borough of Somerset and total estimated annual expenses are \$1,204,400 if capital is fully funded. Therefore, a potential annual ERU rate is \$195.00 without any credit accommodations. If 10% of properties are approved to receive 100% credit then the total annual potential ERU rate would need to be increased to \$216.00. All properties within the Borough will contribute some level of stormwater runoff and administration expenses would be applicable to all properties regardless of the amount of impervious area. Therefore, administration costs could be applied uniformly across all properties as a “Stormwater Fee” or base rate. Impervious area is a variable that will fluctuate with development and credit. Operations, maintenance, and capital are costs that will vary depending on the level expended in each category year to year. ERU rates should be connected to these costs because they are both variable. The following table provides a recommended rate structure for stormwater fees.

RECOMMENDED FUTURE STORMWATER RATE STRUCTURE			
Fee Type	Annual	Quarterly	Monthly
Base Fee	\$180.00	\$45.00	\$15.00
ERU Fee	\$120.00	\$30.00	\$10.00
Total Stormwater Fee	\$300.00	\$75.00	\$25.00
Total Estimated Revenue	\$1,228,500.00	\$307,125.00	\$102,375.00

The fee could be collected monthly, quarterly, or annually depending on the desires of the Borough. It is suggested to bill and collect at least quarterly to collect revenue as expenses are incurred.

The Borough and Municipal Authority should evaluate implementation of the stormwater program to determine if it is necessary to follow the recommended rate structure or begin with a lesser amount for the first few years. During the first few years no capital expenses would be expected because planning, design, permitting, funding acquisition, and other activities will occur prior to implementation of a capital project. These activities can take months to years to accomplish.

We recommend the Borough and Municipal Authority initially adopt a fee structure and implement the program to meet the immediate needs of the community and provide the same type of services currently provided. Increasing efforts and investment within the stormwater system will occur over many years. The below table shows an initial recommended structure based on an annual stormwater related expense of approximately \$250,000.00.

RECOMMENDED INITIAL STORMWATER RATE STRUCTURE			
Fee Type	Annual	Quarterly	Monthly
Base Fee	\$60.00	\$15.00	\$5.00
ERU Fee	\$12.00	\$3.00	\$1.00
Total Stormwater Fee	\$72.00	\$18.00	\$6.00
Total Estimated Revenue	\$236,736.00	\$59,184.00	\$19,728.00

Below is a table summarizing the typical monthly fee assessed by ERU quantity.

Borough of Somerset - Equivalent Residential Units (ERUs)				
3,875 SF = 1 ERU				
Description	Impervious Area (SF)	Parcels	Parcel Monthly Fee	Total Monthly Fee
Zero to 1 ERU	0 to 3,875	2,201	\$6.00	\$13,206.00
1 ERU to 2 ERU	3,875 to 7,750	205	\$7.00	\$1,435.00
2 ERU to 3 ERU	7,750 to 11,625	68	\$8.00	\$544.00
3 ERU to 4 ERU	11,625 to 15,500	57	\$9.00	\$513.00
4 ERU to 5 ERU	15,500 to 19,375	19	\$10.00	\$190.00
5 ERU or More	19,375 or More	153	\$5.00 + ERU	\$3,810.00

SECTION 6: CONCLUSION

This Study was conducted to comprehensively evaluate current and future needs of the stormwater system and recommend a range of potential stormwater fees based on historic and anticipated costs. Stormwater is directly affected by impervious area and quantities of stormwater are related to quantities of impervious area. The Study analyzed the Borough of Somerset to determine prevailing impervious area coverage for the entire Borough and by each individual property. The individual property information was used to determine average impervious area coverage by property. The average impervious area closely resembles a typical single family residence and was selected to be a basis to classify and categorize properties. The typical single family residence described as a unit of measure is referred to as an Equivalent Residential Unit (ERU). There are 6,183 ERUs within Somerset Borough based on an ERU of 3,785 square feet of impervious area as determined by the analysis.

Somerset Borough's existing stormwater system is undersized in certain areas and requires regular maintenance throughout the municipality. Funding regular maintenance and improvements through rate collection by the Authority is preferred by both the Borough and Authority. This approach is similar to the administration of the water and sanitary sewer systems. The Borough and Authority should proceed with adopting an initial rate and adjust rates in the future to accommodate improvements and maintenance activities. The rates described in this study are recommendations and the Borough should coordinate actual rates with budget adoptions and projections to ensure solvency of the stormwater system.

APPENDIX 1 – ERU ANALYSIS AND DETERMINATION

	Averages					
	Above 5 acres	1-5 acres	0.75-1 acres	0.5-0.75 acres	0.25-0.5 acres	0-0.25 acres

APPENDIX 3 – ANNUAL EXPENDITURE ANALYSIS & ESTIMATES

**APPENDIX C - 2023
 ACTUAL ANNUAL EXPENDITURES**

ITEM NO.	POTENTIAL BUDGET ACCOUNT	QUANTITY	UNIT	UNIT COST	ITEM COST
Administration					
1	Executive, Administrative, and Professional Fees	2023 Actual Expense (25% of Actual Expense)			\$191,300
2	Inspections	2023 Actual Expense (25% of Actual Expense)			\$21,600
Administration Total					\$212,900
Annual Operations and Maintenance					
1	Public Works	2023 Actual Expense (33.33% of Actual Expense)			\$209,700
2	Storm Sewer Materials	2023 Actual Expense (50% Street and Storm Sewer Materials Expense)			\$83,900
3	Storm System Cleaning (Catch Basins) 25%/year	133	LF	\$250	\$0
	Storm System Cleaning (Pipe) 25%/year	32,750	LF	\$3	\$0
4	Storm System Inspection 5%/year	6,550	LF	\$5	\$0
Operations and Maintenance Totals					\$293,600
Annual Stormwater Expenditures					\$506,500

Life Cycle Replacement Costs - Present Day Cost (50 years)						
ITEM NO.	POTENTIAL BUDGET ACCOUNT	QUANTITY	UNIT	UNIT COST	TOTAL COST	ANNUAL COST 50 YR LIFE, 0% INFLATION/INTEREST
1	Storm Sewer Piping Replacements	131,000	LF	\$225	\$29,475,000	\$0
2	Inlet Replacements	532	EA	\$5,000	\$2,660,000	\$0
3	Manhole Replacement	105	EA	\$8,000	\$840,000	\$0
Capital Fund Contribution						\$0

Total Anticipated Annual Stormwater Expenditures	\$506,500
---	------------------

**APPENDIX C - 2024
 BUDGET ANNUAL EXPENDITURES**

ITEM NO.	POTENTIAL BUDGET ACCOUNT	QUANTITY	UNIT	UNIT COST	ITEM COST
Administration					
1	Executive, Administrative, and Professional Fees	2024 Borough Budget (25% of Budget)			\$218,100
2	Inspections	2024 Borough Budget (25% of Budget)			\$23,600
Administration Total					\$241,700
Annual Operations and Maintenance					
1	Public Works Staff	2024 Borough Budget - (25% of Budget)			\$209,400
2	Storm Sewer Materials	2024 Borough Budget - (50% Street and Storm Sewer Materials Expense)			\$73,250
3	Storm System Cleaning (Catch Basins) 5%/year (Assumed Budget)	27	LF	\$250	\$6,650
	Storm System Cleaning (Pipe) 5%/year (Assumed Budget)	6,550	LF	\$3	\$19,650
4	Storm System Inspection 1%/year (Assumed Budget)	1,310	LF	\$6	\$7,860
Operations and Maintenance Totals					\$316,810
Annual Stormwater Expenditures					\$558,510

Life Cycle Replacement Costs - Present Day Cost (50 years)						
ITEM NO.	POTENTIAL BUDGET ACCOUNT	QUANTITY	UNIT	UNIT COST	TOTAL COST	ANNUAL COST 50 YR LIFE, 0% INFLATION/INTEREST
1	Storm Sewer Piping Replacements	131,000	LF	\$225	\$29,475,000	\$0
2	Inlet Replacements	532	EA	\$5,000	\$2,660,000	\$0
3	Manhole Replacement	105	EA	\$8,000	\$840,000	\$0
Capital Fund Contribution						\$0

Total Anticipated Annual Stormwater Expenditures	\$558,510
---	------------------

**APPENDIX C - 2025
 PROJECTED ANNUAL EXPENDITURES**

ITEM NO.	POTENTIAL BUDGET ACCOUNT	QUANTITY	UNIT	UNIT COST	ITEM COST
Administration					
1	Executive, Administrative, and Professional Fees	2024 Borough Budget +3%- Typical Year Expenditure (25% Employee Expense)			\$224,600
2	Law - Solicitor Fees	2024 Borough Budget +3% - Typical Year Expenditure (25% Employee Expense)			\$24,300
Administration Total					\$248,900
Annual Operations and Maintenance					
1	Public Works Staff	2024 Borough Budget +3% - Typical Year Expenditure (25% Employee Expense)			\$215,700
2	Storm Sewer Materials	2024 Borough Budget +3% - (50% Street and Storm Sewer Materials Expense)			\$75,400
3	Storm System Cleaning (Catch Basins) 10%/year	53	LF	\$250	\$13,700
	Storm System Cleaning (Pipe) 10%/year	13,100	LF	\$3	\$40,500
4	Storm System Inspection 2%/year	2,620	LF	\$6	\$16,200
Operations and Maintenance Totals					\$361,500
Annual Stormwater Expenditures					\$610,400

Capital Improvements - Life Cycle Replacement Costs - Present Day Cost (50 years)						
ITEM NO.	POTENTIAL BUDGET ACCOUNT	QUANTITY	UNIT	UNIT COST	TOTAL COST	ANNUAL COST 50 YR LIFE, 0% INFLATION/INTEREST
1	Storm Sewer Piping Replacements	131,000	LF	\$200	\$26,200,000	\$524,000
2	Inlet Replacements	532	EA	\$5,000	\$2,660,000	\$53,200
3	Manhole Replacement	105	EA	\$8,000	\$840,000	\$16,800
Capital Fund Contribution						\$594,000

Total Anticipated Annual Stormwater Expenditures	\$1,204,400
---	--------------------
